Re: Postdoctoral Scholar Program

I am interested in participating in the Taiwan-USC Postdoctoral Scholar Program. I would prefer to link with junior Ph.D. scientist with some postdoctoral experience who has an interest in the role of signal transduction, mitochondria, and oxidative stress in the mechanisms of acute and chronic liver injury and fatty liver in animal and cell models involving toxicants, drugs, and overfeeding. The candidate should be well versed in confocal microscopy, qPCR, Western blotting, subcellular fractionation and handling mice. Link to USC Faculty Directory will list my publications.
